

HAVE YOU BEEN DIAGNOSED WITH SCHIZOPHRENIA OR A RELATED DISORDER?

Do you struggle with motivation or socialization?

North Shore Therapeutics invites you to participate in a research study testing a mobile app to improve negative symptoms of schizophrenia.

Participants will be asked to participate in 3 remote study visits over video-conferencing, lasting 2 ½ hours in total. You will be asked to use the mobile app and answer questions about your thoughts and experiences.

Eligible participants must be diagnosed with schizophrenia, schizoaffective disorder, or unspecified psychotic disorder. They must have access to a personal device capable of video-conferencing, and a WIFI connection. Other criteria: Age 18-65 years, proficient in English, no recent hospitalization (within 12 weeks) or change in medications (within 4 weeks), and at least occasional struggles with one of the following: motivation, socialization, apathy, or anhedonia.

A smartphone will be provided for the study. You will be compensated for your time with either an unlocked, refurbished iPhone SE (2nd generation) OR a \$100 gift certificate.
